

Daniel Epler Nuñez

MSc IT product design student

As an aspiring product designer, I am deeply passionate about developing products that foster meaningful and impactful user experiences. My approach combines a robust understanding of UX principles with practical skills in user research/involvement, prototyping, and 3D CAD. I thrive working in multidisciplinary teams where I often find myself exploring and facilitating concepts and ideas by engaging in quick prototyping sessions. This approach, coupled with my strong desire to learn and develop new skills, makes me eager to contribute to meaningful solutions through design that supports the way humans communicate and interact.

WORK EXPERIENCE

ACADEMIC ADVISOR

University of Southern Denmark · Part-time

2024 - Present

- As a research assistant on the use of AI in tangible products, I gain essential experience in research methodology, including preparing literature reviews of the latest research.
- Development of critical thinking in relation to research methods, the significance of research findings, etc.
- Experience in translating research into practice and incorporating it into developing and planning teaching materials for the ITPD program.
- Experience with close collaboration on a project, strengthening my communicative skills in collaborative contexts and the communication of written results.

MEET THE STUDENTS REPRESENTATIVE

University of Southern Denmark · Part-time

2024 - Present

- I have developed my communicative skills in collaboration with potential students, where I gained experience facilitating and adapting advice to meet their needs.
- Experience in planning various events, e.g., open house, and facilitating these events.
